2. Investigate Wind Power (PSPS will occur on windy days)

3. Home Solar systems should install a battery to store electricity for later use.

4. Invest in a natural gas or propane powered generator

5. Save phone battery life during power outages.  
Settings, Battery, Low Power Mode

Gasoline generators will not work well in a power shutoff scenario. You're only allowed to store 5 gallons of gasoline at home. These generators will burn that in a few days. You'll have to find someplace to get gasoline in an unaffected area of the county and have to deal with long gas lines.
